

Breeder's Choice

Extreme ghost Honduran milk snake (*Lampropeltis triangulum hondurensis*)

Submitted by: Joe, Kim and Kane Exposito; Thoroughbred Exotics, LLC; thoroughbredexotics.com; 336-262-1568

BREEDER COMMENTS: "This guy was totally unexpected. His extreme hypo heterozygous anerythristic mother was only 2 years old, and we did not plan on breeding her, but when she began to ovulate, we paired her with a ghost male. We were not expecting her to produce, but when we returned from the NARBC show in Virginia last year at about 2 a.m., we were met with a very pleasant surprise. He was the first extreme ghost for us, and there are few in existence. We are very excited about future breeding projects that include him."
