

Breeder's Choice

Piebald Black-Pastel Ball Python (Python regius)

Submitted By: Gulf Coast Reptiles

BREEDER COMMENTS: "A beautiful combination of the codominant black-pastel gene to the recessive piebald gene produces this awesome new color-pattern combo first produced here at Gulf Coast Reptiles in 2007. Our goal is to produce a piebald super black ball python during the 2008 season in time to display at the National Reptile Breeders Expo in Daytona Beach, Fla."
